Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim 2 is objected to because claim 1 is directed exclusively to a timing gear having a bevel gear, whereas claim 2 is directed to the different embodiment having worm gears. Claim will not be treated on its merits. Furthermore, the drawings fail to show the worm gear embodiment; correction is required.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1, 3, and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Agapiades et al (5988133) in view of Runde et al.

Agapiades et al disclose the basic combination of a timing gear, shaft, and bevel gear.

However, no resilient member is disclosed. Runde et al disclose the recited resilient (rubber) member 20 within a gear for reducing noise. It would have been obvious to one of ordinary skill in the art to one of ordinary skill in the art use the resilient member of Runde et al in Agapiades et al to reduce noise.

In regard to claims 3 and 4, the choice of rubber is deemed an engineering choice depending on such parameters of reliability, cost, weight, damping performance.

The remaining patents are cited of interest to show damped gears and should be carefully considered when amending the claims.
